Monday, July 12th 2021

Dear Partners,

We are pleased to announce that Schneider Electric is launching an assessment to better understand and monitor information security and data privacy performance of its supply chain ecosystem. Your company has been identified as a key partner and an early participant in this initiative.

We have mandated CyberGRX to conduct the assessment and follow-up improvement process. Cyber-GRX combines proven risk management expertise and collaborative technology that we believe can save both your company and Schneider Electric time and resources relating to information security management and reporting.

We believe that the combination of their cloud-based solution and CyberGRX' 'complete once - share universally' approach to audits will save your organization time and money as you minimize response times and cut out spreadsheets each time you receive a ISMS risk assessment request from a client. Additionally, it will allow us at Schneider Electric to increase transparency, standardize reporting, and facilitate improvement.

If you have already completed a CyberGRX assessment (in the past year), you will be asked to share your scorecard with Schneider Electric. If not, you will need to do it. CyberGRX will provide you with:
- A confidential and efficient cybersecurity questionnaire reviewed by their team of security analysts
- A detailed scorecard highlighting strengths and improvement focus areas that you can share with other clients
- Tools for developing cybersecurity and data privacy best practices

Please note that your participation in this assessment is mandatory and performance results will be integrated into our sourcing systems. Note also that Schneider Electric funds the first year of your CyberGRX assessment.

While enhancing your company's relationship with Schneider Electric, CyberGRX also provides you with the opportunity to share the results of this independent and in-depth assessment with an unlimited number of partners.

We look forward to your response and seeing a completed assessment for your company. Should you have any questions or need help during the assessment process, please do not hesitate to contact CyberGRX via support@cybergrx.com.

Best regards,

Mansur ABILKASIMOV
Cybersecurity Governance Director
